

Definition of BriarPatch Local Sacramento River Hydrologic Region

The Sacramento River Hydrologic Region

includes the state's largest river—the Sacramento River—that provides about 80% of the inflow to the Delta and provides essential habitat to all runs of Chinook salmon and steelhead.

Regional wetlands provide important wintering areas along the Pacific Flyway for many varieties of waterfowl. The region also supports about 2.2 million acres of irrigated agriculture (22% of the state total).

Major tributaries include Putah Creek, American River, Feather River and its major tributaries Bear River and Yuba River.
